### **DETAILED ACTION**

1. This Office Action is response to Applicants' Amendment filed on 12/08/2005.
2. Claims 47-52 have been added.
3. Claims 43-52 are allowed.

### **Allowable Subject Matter**

4. The present application has been thoroughly reviewed. Upon searching a variety of databases, the examiner respectfully submits that claims 43-52 are allowed in light of the applicants' argument and in light of the prior arts of made record.
5. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a method and computer system for a data relocation and a data storage position management main program collecting volume physical storage position management information and physical storage apparatus operation information from a storage apparatus, and storing them as storage apparatus arrangement information and storage apparatus operation information, determining a data relocation plan and data migration instruction being issued to conform to the data relocation plan, and acquiring information on a database to be managed by said database management system through said computer, wherein said information on database contains at least one of information relating to a data structure including table, index and log defined by a schema of said database management system and information relating to record positions of said database and wherein said storage apparatus has at least one physical storage means for storing at least one piece of

data/data, and said allocation determination means determining a data allocation which specify a storage position in said physical storage means of said storage apparatus.

The closest prior arts, Lowenthal et al. (hereinafter Lowenthal) of 6,035,306 teaches method for improving performance of large databases, relating to a performance analysis tool considering mapping between DBMS, file system, volume manager and storage system. The tool also has a function of creating an object relocating plan to migrate a second-high load object to a group of lower-load storage devices. While, Ledain et al. (hereinafter Ledain) of 6,021,408 teaches the logical data transfer path between a storage device and writing migration of data to the archival storage.

Thus, in combination, Lewenthal and Ledain fail to teach "information on database contains at least one of information relating to a data structure including table, index and log defined by a schema of said database management system and information relating to record positions of said database and wherein said storage apparatus has at least one physical storage means for storing at least one piece of data/data, and said allocation determination means determining a data allocation which specify a storage position in said physical storage means of said storage apparatus."

6. These distinct features, in conjunction with all other limitations of the dependents and independent claims render claims 43-52 them allowable.

7. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
